PROFILE SUMMARY

Software Developer with 3+ years of experience building secure, scalable web applications. Specialized in frontends with Vue.js and React, and backend services using Node.js and Spring Boot, backed by MySQL and PostgreSQL data layers and deployed on AWS. Experienced in optimizing backend business logic, automating deployments and database migrations, and monitoring production systems. Strong focus on system reliability, Agile delivery, and continuous learning in AI and modern software development practices.

CORE SKILLS

Languages: JavaScript, Python, Java, C, SQL
Frontend: Vue.js, React.js, Angular, HTML, CSS, Bootstrap
Backend: Node.js, Spring, Spring Boot, Django, REST APIs, WebSockets, Microservices, ORM, Integrating SDKs
Databases: MySQL, PostgreSQL, Redis
Cloud & DevOps: AWS, GitHub, GitLab, Grafana, New Relic, SonarQube, Basic Linux/Unix commands
AI & GenAI: Generative AI, LLM-based Automation, AI-Assisted Development, Prompt Engineering
Practices: Agile, Data Structures & Algorithms, OOPS, Unit Testing (JUnit), Code Review, Debugging, Figma, Power Automate

WORK EXPERIENCE

Software Engineer **SEP 2024 - PRESENT**
Tenant India Pvt Ltd Bengaluru, India

- Contributed to Consumer & Revenue Management platforms by developing scalable features using Node.js, Vue.js, and MySQL.
- Optimized backend business logic across Lead and Revenue modules, improving system efficiency and reducing API response time by 30%+.
- Developed the Superlease document feature, enabling automated document generation and real-time updates at the property level, cutting manual document preparation effort by 60%+.
- Implemented a bulk "Select All" feature, enabling large-scale operations and reducing manual effort by 50%+ across datasets.
- Built reusable Vue components, reducing redundant UI code by 30%+ and improving development speed by 25%+ across modules.
- Developed automated validation scripts for backend workflows, reducing manual verification effort by 40%+ and improving deployment confidence.
- Implemented an HB Alchemy-based database migration pipeline, eliminating manual script execution, cutting schema deployment time by 50%+, and ensuring consistent, automated schema deployments across environments.
- Leveraged AWS S3 logs, Grafana, and New Relic to monitor system behavior, analyze performance issues, and resolve critical production incidents, reducing resolution time by 30%+.
- Collaborated using GitHub for version control, code reviews, and deployments to ensure code quality and reliability.
- Optimized MySQL queries through indexing and query restructuring, reducing average query response time by 30%+ on high-traffic Lead and Revenue modules.
- Reduced manual operational effort for the business team by 40%+ through automation of recurring data and document workflows.

Associate Software Engineer **MAR 2024 - AUG 2024**
Brillio Technologies Bengaluru, India

- Developed a Customer Support Dashboard using React and Spring Boot within a microservices architecture for tracking and visualizing operational metrics.
- Designed and implemented backend services with a focus on scalability, reliability, and maintainability.
- Improved code quality and system stability using SonarQube analysis and JUnit-based unit testing, reducing code smells and post-release defects by 30%+ and maintaining 80%+ unit test coverage.
- Worked in an Agile environment, contributing to sprint planning, development, testing, and deployment cycles.

- Utilized AWS services and monitoring insights to support application stability and resolve issues during development and testing.
- Completed the LBJ (Learn Before Joining) Program, gaining hands-on experience in AWS, Web Development, MySQL, Agile practices, and Data Structures & Algorithms.

React Development Trainee **SEP 2023 - MAR 2024**
TMI Group Hyderabad, India

- Developed responsive and reusable frontend components using React.js, HTML, CSS, and JavaScript, ensuring consistent UI across multiple modules and reducing UI development time by 20%+.
- Built dynamic web applications by integrating RESTful APIs, enabling real-time data fetching, processing, and display.
- Improved application performance by optimizing component rendering and reducing unnecessary re-renders, improving page rendering performance by 25%+.
- Collaborated with backend teams to ensure smooth API integration, proper data flow, and efficient error handling.

KEY PROJECTS

Consumer & Revenue Management Platforms | Tenant India
Technologies: Node.js, Vue.js, MySQL, AWS
- Developed and delivered scalable full-stack features across the Lead and Revenue modules.
- Built Superlease, an automated document-generation feature, and implemented bulk-operation capabilities.
- Supported reliable releases with automated database migrations and validation scripts.

Customer Support Dashboard | Brillio Technologies
Technologies: React, Spring Boot, Microservices, AWS
- Built a dashboard to track and visualize operational metrics for customer support teams.
- Used SonarQube and JUnit to support code quality, testing, and release readiness.

EDUCATION

Bachelor's in Technology (B.TECH) in Artificial Intelligence **8.82 CGPA, 2019-2023**
Anurag Group of Institutions

CERTIFICATIONS

AI For Everyone (Coursera)
UX Foundation Learning Journey Certificate (Adobe)
AWS Certified Generative AI Developer (LinkedIn)
AWS Essential Training for Developers (LinkedIn)
